WORK EXPERIENCE

Fieldwire by Hilti

San Francisco, CA

Software Engineering Manager, Office Team & Reality Capture Construction Team October 2024 - Present

- Stood up a new Reality Capture engineering team from scratch. Hired a Staff iOS engineer, Android engineer, and recruited two internal full-stack transfers. Coordinated with Hilti's computer vision researchers to deliver a working SLAM/VISLAM prototype in 3 months and drive the upcoming computer vision roadmap. Currently in Beta, driving to a full release in December 2026.
- Concurrently managing the Office Team, and led the team through the rollout of our new fine-grained policy-based access control feature, enabling granular personnel management on large-scale construction projects globally.
- Additionally, drove operational health improvements: introduced SLO/SLA monitoring via Grafana and reduced noisy on-call alert volume to 1-2 actionable pings/week, cutting noise and improving team sustainability.

Redfin

San Francisco, CA

Software Engineering Manager, Tour Automation Team

February 2021 - October 2024

- Led the team through the beta-testing phase of a new Tour Details Page for Redfin-employed Tour Coordinators. Worked with senior developers to focus on key design choices (including introducing TypeScript to shield against common frontend regressions) and best practices to reduce regressions and stabilize the feature during rounds of product iteration. This brought a project spanning nearly 2 years and at least 14 developers to a successful close with measurable productivity gains to Tour Coordinators.
- Led Redfin's adoption of Twilio Messaging Services to support our compliance with Application-to-Person 10-Digit Long-Codes (A2P10DLC), which unblocked faster peak messaging for Partner Growth and saved 25-50% of new carrier-imposed fees.
- Championed the career growth of each individual on the seven-member team, and successfully promoted two software developers to the next level, one to Staff and one to Senior.

Alloy

San Francisco, CA and Washington, DC

Senior Software Developer

July 2019 - January 2021

- Was Alloy's fourth engineering hire, making key technical decisions including building our MapReduce pipeline, introducing Split as our A/B test platform, introducing full-stack integration tests early on, and building public Swagger API documentation for our partners to build API integrations.
- Built Alloy's voter registration API from scratch for checking individual voter registration status in advance of the 2020 National Election, which was used by over 30 partners and enabled over 15 million voter registration checks.

Redfin

San Francisco, CA

Software Developer, Tour Automation Team

July 2016 - July 2019

- Built APIs and managed an external vendor's REST API design to enable Redfin Tour Coordinators to instantly confirm home showing times, increasing tour completion rate by 4%.
- Redesigned Redfin's technical interview process around a take-home coding exam, which shortened the interview process to save developers an average of two hours per week, and allowed the recruiting team to expand our talent pool to bootcamp graduates and candidates from non-target universities.
- Acted as Interim Software Engineering Manager from April - September, 2018.

Pandora (via Rdio Acquisition)

Oakland, CA

Software Developer, Ad Targeting and Delivery Team

January 2016 - June 2016

Rdio

San Francisco, CA

Software Developer, Backend Features Team

July 2014 - January 2016

Piazza

Palo Alto, CA

Software Developer

June 2013 - June 2014

EDUCATION

Carleton College

Northfield, MN

BA Computer Science, *Cum Laude*

June, 2013

SKILLS

Python, Java, Golang, JavaScript, Git/GitHub, Django, React, Pyspark, Postgres, MapReduce, AWS, Incident Management, Mentorship, Hiring, Career Development, Agile Software Development
